

Centre Lakes

3281 E Guasti Road
Ontario, CA 91761

Project: Empty 50,000 decorative lake which was originally lined with a clay/plastic liner. Depth of lake was 15 feet.

Upon emptying lake, an excessive amount of debris that had collected over the 20 year life of the lake had to be removed.

A front end bob-cat loader removed the final layers of debris and the ground was then compacted.

The WeatherWeld Seamless Composite system was then applied in two total passes of 30 gallons of emulsion and 16 pounds of multi-filament fiberglass roving.

After a two week curing, the South Lake was refilled.

Today, the WeatherWeld liner is holding over 8 million gallons of water and an ecosystem of thousands of coy fish.
